

Preface

This volume contains the papers presented at dpcp22: Doctoral Program of CP2022 held on July 31, 2022 in Haifa.

There were 23 submissions.

The Doctoral Program (DP) of the CP conference is open to all research students (including past participants) conducting research on constraint programming and related topics. The aim is to gather student researchers, discuss ongoing work in a relaxed atmosphere, and provide an opportunity for students to interact with experienced researchers.

The program is a full-day event. It includes short presentations of student papers, discussions with senior researchers, and networking activities for researchers in similar areas. If a physical conference is going ahead, the day will close with a dinner.
